

**DIMENSIONS**

in inches

Burner for Typical Hard Wall Construction

Main air is drawn at 3 o'clock for convenience in showing flange dimensions, but arrangement designators are specified relative to main air at 12 o'clock. Thus the dimension drawing portrays a 3bf arrangement. (See Bulletin 6825 re arrangement designators.)

**NOTE:**

1. Pilot must be located in center hole and at least 90 degrees from the main air inlet. Position selected should not place the pilot, observation port, and flame monitoring adapter boss in a bottom quadrant of the burner when installed.

‡ Except for -8-A, use supply piping with oversized flange.

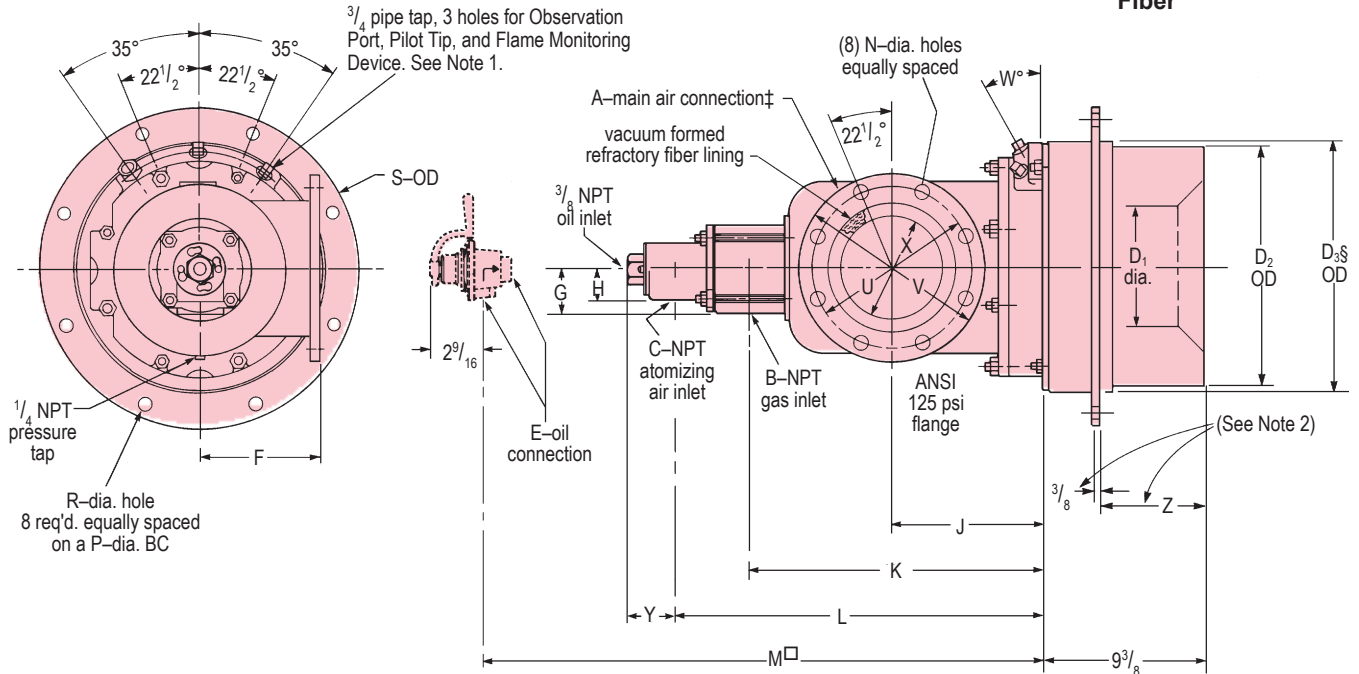

§ Furnace opening should be 1/2" larger than dimension D<sub>2</sub>.

□ Piping not furnished by North American. Dimension M assumes the use of a close nipple between burner and Sensitrol. Optional (recommended) Sensitrol Oil Valve is not included as part of the burner assembly, and must be ordered separately.

# DIMENSIONS

in inches

## Burner for Typical Fiber

Main air is drawn at 3 o'clock for convenience in showing flange dimensions, but arrangement designators are specified relative to main air at 12 o'clock. Thus the dimension drawing portrays a 3bf arrangement. (See Bulletin 6825 re arrangement designators.)

**NOTE:**

1. Pilot must be located in center hole and at least 90 degrees from the main air inlet. Position selected should not place the pilot, observation port, and flame monitoring adapter boss in a bottom quadrant of the burner when installed.
2. "Z" dimension variable from 2" to 9" by 1/2" increments for fiber wall construction. When "Z" dimension is equal to 9" the backplate and mounting flange will be one piece.
